

Environmental Policy Statement

Purpose and scope

The policy statement outlines our commitment to achieving robust environmental performance across all of Kiwa UK operations. This applies to all Kiwa UK employees whether working at a Kiwa location or a client location.

Policy objectives

Overall responsibility for environmental management within Kiwa UK resides with the CEO and the Leadership Team. They are responsible for implementing the environmental policy and reviewing existing arrangements to ensure that sufficient resources are allocated for its effective execution.

Reducing our environmental impact is a priority and the goals are centred on continually improving our culture and operational procedures in order to meet our environmental objectives.

We will achieve our goals by implementing an ISO 14001 environmental management system in UK operations, which will ensure compliance, optimise our procedures, and lead to control of our carbon footprint.

Requirements

Identify applicable laws and regulations: We identify all applicable laws, regulations, guidance and other requirements and ensure that appropriate controls are in place to achieve compliance.

Identify and manage environmental risks: Our risk management processes identify what we need to do in order to control the impact of our activities on the environment.

Promote continuous improvement: Setting objectives and targets will drive continuous improvement in our performance, thereby helping us control our environmental impact.

Instil appropriate behaviours within our people and ensure they have the required skills: We do this by engaging with our employees. We give them the skills, knowledge, experience, training, understanding and attitude to ensure they have the competencies to minimise impact to the environment.

Develop an effective culture: We foster a culture of open communication, where all our employees feel valued and able to raise concerns on environmental matters. Our managers will treat the concerns of our people seriously and respond accordingly.

Consultation and participation of employees: We will routinely consult on environmental matters as they arise and implement improvements through continuous improvement.

Measure and report performance: Through a balanced approach to metrics, including leadership engagement and post-incident review processes, we learn the lessons necessary to prevent future recurrence.
